METADOR

Maximum Security

DDA Compliant

The Defender Xtreme range is comprised of four levels of ultimate steel security doorsets, third party tested and accredited by BRE to the stringent requirements of the LPS 1175 Issue 8 scheme created by the internationally recognised standard established by The Loss Prevention Certification Board (LPCB).

We have tested a huge range of configurations, hardware and glazing options to suit most emergency exit and personnel door requirements.

Door Leaf

- Galvanised steel skins (varying thickness depending on level required)
- Internal steel strengtheners/solid timber core
- Mineral wool for superior insulation
- Anti-jemmy flanges to the leading edge of the leaf for excellent jemmy resistance
- Large number of glazing options available to be incorporated
- Louvred grilles of various sizes can be incorporated on some levels

Mechanically fixed ensuring strength and rigidity.

Frame

- Galvanised steel profiles
- Profiled headers and vertical posts fixed with strong M8 bolts ensuring rigidity, superior to welded or riveted frames
- 16no threaded adjusters, compensating for most structural opening irregularities

No need for shims or packers, providing an extremely secure fit.

Thresholds

- 2mm stainless steel profile
- DDA compliant
- Available as outward, inward opening and ramped.

Seal

For optimum weather, thermal and acoustic performance, a durable tubular silicone rubber perimeter seal is bonded into the frame.

Over Panels/Side Panels

- Single/double glazed, louvred or solid
- Dependant on level required, check link to certificates for details.

Hardware

- 4no stainless steel hinges for smooth operation
- Dog bolts secure the leaf into the frame if hinges are attacked
- A huge range of locks, latches, lever handles, panic hardware, closers and stays available.
